Justin Bieber – Baby (remix)

For Horn, Trombone, Percussion, and Electronics

Mac Waters

notes:

before I knew how to listen to music, I would load songs onto my shiny blue clip-on iPod shuffle and run around my yard hearing them. Justin Bieber's infamous and iconic single "Baby" may have been one of those songs—I couldn't be sure. I also couldn't tell you the last time I listened to Justin Bieber's "Baby" on my own volition, yet I remember every word. what does it mean to have a listening history that inherently informs our current musical practice and listening mode? what does it mean that this "musical history"—up unto a certain point (or perhaps not)—is purely circumstantial?

the horn player should play as independently as possible from the other players – the best-case scenario would be that the horn player listens to the horn track in noise cancelling headphones. any means to eliminate cross-contamination of sound for the horn player should be taken.

the percussionist and trombone player should play into the sound of the electronic tape part as much as possible. unless otherwise notated, they should play as if they are a part of the electronics. the tape part is notated as to give the players a relative rhythmic/lyrical guide, but ideally the players should be somewhat acquainted with the tape's contours and rhythms.

all players utilize a one-line staff to indicate speech

notations:

brass:

 air sounds  exhale, inhale through instrument  flutter

 slap tongue  sing through instrument

percussion:
--triangle, 3 wood blocks, low tom-tom, snare drum, bongos, 2 suspended cymbals

Justin Bieber - Baby (remix)

Mac Waters

the nostalgia of staring out a car window with headphones in, tuning out any other sounds as much as you can. your parents are playing something on the radio, but you can barely hear it.

lean into the sound of the tape part (in your ears only) and play the notated pitches very carefully and meditatively. the tape part consists of the opening phrase to justin bieber's "baby," which consists of a guitar synth alternating with justin bieber's iconic "oh-woah"vocalizations. play the pitches in order, at a soft dynamic, using the full breath. justin bieber will be singing along with you very slowly, but he is not meant to be a dictator over when you change pitches. rather, he is there as a temporal/thematic/spiritual guide. do not follow him exactly. there should, however, definitely be pauses in between phrases (as there are in the tape part when the guitar synth interjects). these moments may be moments to pause and reflect, breathe through the instrument, prepare the next pitches, recognize the outside world bleeding through your headphones. at 3:55, ludacris will interrupt, and the music you hear in your ears will align with the other players. at this point, begin playing (speaking) at m.147 on the following page.
